

Kronoart®

Kronoart hi-definition facades marks the start of an exciting new era in architecture – where design possibilities are endless.

Comprising four distinct collections, the revolutionary Kronoart range features over 100 new decors that have been developed in line with trends insights and in collaboration with some of the world’s leading designers and architects.

With a choice of four distinct collections – and six texture options – Kronoart panels can be specified as a standalone feature or to complement existing Kronospan products.

Print technology

In our established range we have introduced the ability to create hi-resolution designs of up to 15 m² with no pattern repeat – as well as any bespoke decor in hi-resolution and at a width of up to 2040 mm – which is founded on industry pioneering print technology.

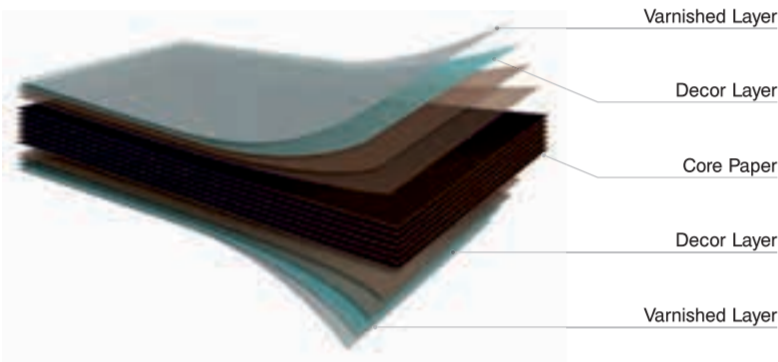

By printing directly onto the substrate – at a resolution of over a million colors – Kronoart is a flawless, deep and consistent design reproduction that is more than 200% clearer than any other facade print.

Its wood grains have the most incredible depth and accuracy, colors are more vivid and natural materials are recreated so realistically that it’s difficult to distinguish them from the real thing. What’s more, the ability to print any bespoke design makes for limitless creativity in any project.

Kronoart performance

Kronoart’s unrivalled performance is founded on its closed surface properties and layer of highly durable varnish. As a result, its benefits include exceptional resilience to impact, stains and environmental conditions. It also means that it is extremely easy to clean and maintain. So not only is Kronoart aesthetically superior to rival products, it also looks better for longer and requires minimal maintenance. For added peace of mind, it comes with a 10 year comprehensive guarantee and has fire retardant properties in accordance to EN 13501-1. All designs are also available on particleboard, MDF and compact substrates for interior use.

For further information and technical information, please contact your Kronoart consultant or visit our web page at www.kronospan-express.com.

Sizes

Thickness [mm]: 6, 8, 10, 12, 13.

Both sides UV protected.

Collections

Elements

The premium collection within the Kronoart range, the detail of each Elements design is simply stunning.

By using a print resolution of over a million colors, Elements exterior facades perfectly replicate the look of natural materials such as oak, ash, marble, concrete and slate.

As a result, wood grains boast the most incredible depth and accuracy, colors are more vivid and natural materials are recreated so realistically that it's difficult to distinguish them from the real thing. Developed in line with global trends insights - and in close consultation with leading designers and architects.

Concept

The Kronoart Concept collection is the most original within the range and offers endless possibilities in terms of bespoke design options.

Thanks to industry leading print technology, any bespoke decor can be printed in hi-resolution and at widths of up to 2040 mm. The only design limitation to overcome here would be your creativity. Please contact one of our Kronoart consultants to discuss your requirements.

Fundamentals

As Kronoart’s standard collection, Fundamentals offers 20 highly popular, sought-after designs that meet the fast pace of the construction industry.

For ultimate convenience, Express facades from this collection are also kept in stock – whether that’s traditional and contemporary woods, render and concrete or brush steels and oxidized metals.

Color

With almost 54 shades to choose from, the broadest palette of muted tones to vibrant primaries can be sourced within Kronoart’s Color collection.

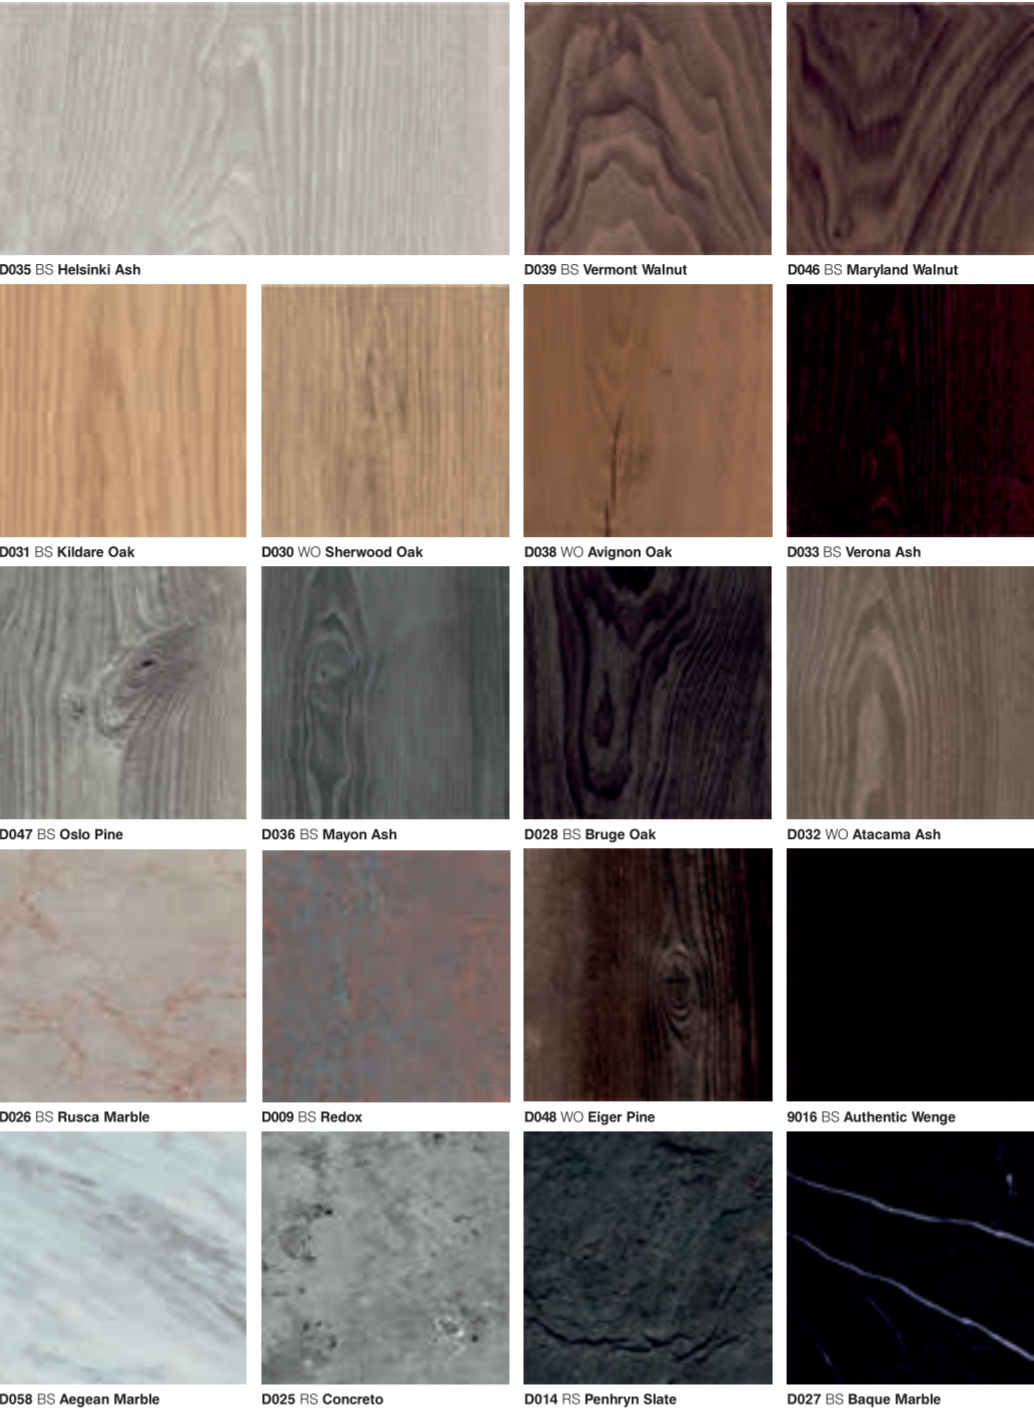

For further information and technical perimeters please contact one of our Kronoart consultants or visit our web page at www.kronospan-express.com.

Textures

Kronoart facades are available in 4 durable textures that replicate a whole host of stunning surfaces - from the warm, natural textures of solid wood to harder stone and metallic finishes.
